

One Day Paper:

Prompt: You have one choice and a ton of power, but it's up to you how you use it.

You can eliminate all the negative components of power production (power plants, cars, boats, etc.) that harm the planet, and heal our Earth very quickly, but energy will cost 3 times the normal price (Gas = \$3.00/gal vs. \$9.00/gal), so people with lower incomes will suffer greatly, but the planet will heal and future generation would have a healthy place to live.

————— OR —————

Change nothing and let humans destroy the planet for future generations and ruin a chance at a healthy life. This would keep people from suffering financially now, but the long term effects would be insurmountable.
