

Mineral Project:

You Be The Salesperson

Questions to Consider:

1. What is it used for?
2. Where does it come from?
3. Is it worth a lot of money?
4. Is it difficult to mine or collect?
5. Is it conflict-free?
6. What are the secondary uses?
 - a. Some minerals are added to water and used to cut other materials that we use all the time
 - b. Diamonds are not just pretty to look at. They are used in saw blades, grinding stones, surgical knives, etc.
7. Can it only be gathered in one part of the world, or is it everywhere?
8. Can anyone gather your mineral? Or do you need a lot of machinery in order to collect it?
9. Why should we want to buy it?
10. What common items that we use on a regular basis contain your mineral?
